

PEDIATRIC PSYCHOPHARMACOLOGY:

How Medications Can & Cannot Help Vulnerable Students

DR. JOSEPH HEWITT is presenting this workshop to provide psychologists with information that they need to know about psychotropic medication. He will discuss the merits of one selection of category medication over another in educational treatment planning. Controversies such as suicidality, brain development, metabolic and cardiac effects, and dependent issues will be addressed.

WORKSHOP OBJECTIVES

- Attendees will be able to describe the various medications used to treat children and adolescents with mental health disorders
- Attendees will be able to list the indication for medication by disorder as well as symptom(s)
- Attendees will be able to demonstrate familiarity with psychotropic medication side effects, medical complications, latest research and future directions
