

Math for the AUTISTIC BRAIN

Students with complex instructional needs may struggle to learn every day math concepts.

Day One of this workshop will address how the brain learns math, the use of the PA Math Standards to guide what to teach as well as assessment options. Participants will gain practical experience with the PA Math Standards, have time to practice new skills as well as review assessment materials.

Day Two will focus on what your assessment data showed, instructional practices as well as ongoing assessment needs. A variety of instructional strategies and discussions groups will be utilized to support engagement and learning
